Correcting an aircraft's possession date/time.

User needs to delete some flying hours that already loaded to JFSD and re-add those flying hours against UHJD. The user cannot re-add the flying hours against the 02228 day because, according to G081, the aircraft was possessed by JFSD all day long, despite the possession transfer via 9005.

To solve this problem, the user will have to do six things:
1. Review current 8047 prior to making any changes.
2. Execute another 9005 transaction to set possession back to UHJD on the 02228 day, a few hours prior to the flight times they need to load. In this case, the time of 1200 was chosen which was prior to flying hour of 1328.
3. Review 8047 to ensure status hours were properly updated.
4. Load the flying hours as necessary via 9020
5. Execute another 9005 transaction to set the possession back to JFSD. In this example, the aircraft was loaned to UHJD for a few weeks and then transferred back to JFSD.
6. Review the 8047 report to ensure all status hours were correctly reset.

Step 1: Review 8047 report.

Step 2: Set possession back to UHJD on 02228 day at 1200. This transaction will set all overwrite (delete/re-add) all status records from the effective transaction date/time to the current status record to UHJD, too.

Step 3: Review 8047 report to ensure status records were properly updated.

Step 4: Load aircraft flying hours via 9020; 9020 instructions ommitted for this document.

Step 5: Set possession back to JFSD for the proper date. This will reset the overwriten status records back to JFSD.
